

1. Get Started

The interface connects to the OBD socket in your car and uses Bluetooth to communicate data wirelessly from the vehicle to your mobile device.

Make sure your car is from 2001 or later to be sure to have this standardised connector.

2. Connect to your car

The socket should be located somewhere on the drivers side of the car, usually on the left side of the steering wheel.

Plug in the interface.

3. Launch an app

Go to Play Store on your Android device, search for Infocar and download your choice of apps.

Run the desired app and follow the on-screen instructions.
